

# Foolproof Curing with Vivi – Step by Step

Ready to level up your cure? Start with 3 to 12oz (85–340g) of *fully dried* flower. Vivi Cure is **NOT** intended for drying. Your bud **MUST** be fully dried **AND** within the 3–12oz (85–340g) range for Vivi Cure to cure properly. Vivi Cure dials in the perfect humidity for your cure gradually and precisely for a flawless finish every time.

*Fully dried flower should have an aW of .6 with stems that snap, not bend.*

## Instructions

1. Add 3–12oz (85–340g) of fully dried flower to an airtight container.
2. If you have a multi-pack, remove one Vivi Cure pack from the resealable bag, and press the seal tightly to close. For individually purchased Vivi Cure packs, remove the clear wrapper from your Vivi Cure and discard the wrapper (but don't mess with the brown Vivi Cure pack—no cutting or tearing!)
3. Place Vivi Cure in with your buds, seal the container shut, and store in a cool, dark place.
4. Go do something else for 10 days. You don't need to burp or babysit your cure.
5. After 10 days, open the container, toss the used Vivi Cure pack, bask in the glory of terpene perfection, and enjoy.

### Can I reuse my Vivi Cure pack? Nope!

Once your Vivi Cure has completed a 10-day cure, it should be discarded. Attempting to reuse Vivi Cure could result in overdrying, molding, and an improperly cured crop.

**Enjoying your bud? We'd love to hear your feedback!**
